

FARZAN BASHA SHAIK INKOLLU

Kummari Bazar, Vinukonda, AP · +91 9581410377 · farzanbasha2004@gmail.com

OBJECTIVE

Motivated Computer Science graduate seeking an entry-level software engineering position. Eager to leverage strong foundational skills in Python, Django, MERN, MEAN stacks, and SQL to build robust, scalable applications in a dynamic and collaborative environment.

EDUCATION

B.Tech in Computer Science & Engineering Narasaraopet Engineering College	2022 – 2026 CGPA: 7.3
Board of Intermediate Education (MPC) Sri Chaitanya Junior College	2020 – 2022 Score: 57%
Secondary School Certificate (SSC) Narayana E-Techno High School	2019 – 2020 Score: 88%

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL
- **Full-Stack Web Development:** MERN Stack (MongoDB, Express.js, React.js, Node.js), MEAN Stack (Angular), Django
- **Databases:** MongoDB, MySQL / PostgreSQL
- **Web & UI/UX Design:** HTML5, CSS3, JavaScript, UI/UX Design Principles, Bootstrap
- **Tools & Frameworks:** Git/GitHub, RESTful APIs, JWT, Bcrypt, TensorFlow, Keras, OpenCV

PROJECTS

Hospital Management System | *MERN Stack* GitHub

- Built a full-stack web application using MongoDB, Express.js, React.js, and Node.js to manage medical records, patient admissions, and doctor schedules efficiently.
- Implemented secure user authentication and authorization using JSON Web Tokens (JWT) and Bcrypt hashing.
- Designed responsive dashboard UI components with React to enable real-time tracking of appointments and dynamic billing updates.
- Created RESTful API endpoints for seamlessly handling CRUD operations with cloud database integration.

Food Delivery Website | *Python, Django, SQL* GitHub

- Developed a feature-rich online food ordering system using Django and Python, allowing users to search menus, manage dynamic carts, and process orders.
- Architected relational SQL database schemas for managing complex interactions between user profiles, restaurant menus, and order logs.
- Implemented custom role-based access control (RBAC) separating administrative, restaurant partner, and customer privileges.

Learning Ridge Structures: Adaptive CNN-Based Local Orientation and Frequency Estimation | *Deep Learning, Python*

- Developed an adaptive Convolutional Neural Network (CNN) in Python for accurate local orientation and frequency estimation in fingerprint images.
- Preprocessed image data using OpenCV and NumPy to enhance ridge clarity and filter noise prior to deep neural network feature extraction.
- Evaluated model precision and verification accuracy using TensorFlow and Keras pipelines.

HOBBIES & INTERESTS

- **Competitive Programming & Problem Solving:** Practicing algorithmic challenges on platforms like LeetCode and HackerRank to sharpen core logic.
- **UI/UX & Web Design Prototyping:** Exploring frontend visual design trends and layout prototyping using tools like Figma.
- **Open-Source Exploration:** Learning and contributing to open-source GitHub repositories focused on full-stack web development.
